

## 1980

The story of «CERB COSTRUZIONI ELETTROTECNICHE began in 1980

## 2006

“CERB SRL” was founded in 2006 following the conferment of the production activity of “CERB COSTRUZIONI ELETTROTECNICHE”, established in the early 80s.

The added value of the company lies in the utmost attention during standard production and creation of new samples, focusing on the direct and in some cases exclusive relationship with the customer. Over the years “CERB” specialized in toll manufacturing of film power capacitors, inductances and windings for power factor correction processes.

## 2007

In 2007, the company becomes a professional turnery and provides an even more specific service with the introduction of two CNC sliding head lathes

## 2012

After the company relocation from Crevalcore to Sant'Agata BOLOGNESE in 2012, Due to lack of space for the production, the company purchases a 27-ton die-cutter machine and improves the performance of metal shearing thanks to additional dedicated presses.

## 2018

Currently, CERB can also rely on 6 electric spot-welders, with the widest offer of spot-welding services.

During the last years, the company develops its skills in assembly process.

This is the reason why CERB decides to expand his business, becoming a

**professional manufacturer of injection molded plastic parts.**

## ABOUT US

### **BROADENING THE HORIZON – INJECTION MOLDING**

During the last years, the company has developed its skills in assembly process, combining metal and plastic parts.

Following to an organized and intentional growth strategy, CERB decided to expand his business becoming a professional manufacturer of injection molded plastic components.

With this aim, the company started to think about a new and specialized manufacturing plant for mass-production processes in Romania making the most of the principal advantage of injection molding, where the same part is being created thousands or even millions of times in succession. In August 2018 this plant was actually put into service.

## SERVICES
